Problem statement 1 and 2

For $x_1, x_2, \dots, x_n$

(i) Mean = $\frac{\sum_{i=1}^{n} x_i}{n}$

(ii) Median if you arrange $x_i's$ in order for n odd number, median is the $x_{\frac{n}{2}}$ and for even n median is $(x_{\frac{n}{2}} + x_{\frac{n+1}{2}})/2$

(iii) Mode is the distinct value of x_i with the highest frequency given that the frequency is greater than 1.

(iv) Standard deviation is the square root of ($\frac{\sum_{i=1}^{n} x_i^2}{n}$ - $mean^2$)

Using R to calculate the above

```
> #Assignment stats 1

> std_calls = sqrt(var(calls))
> std_calls
[1] 39.33893
```

answer for Problem 1

(i) Mean = 6.85
(ii) Median = 7
(iii) Mode = 7
(iv) Standard deviation = 1.6331112

answer for Problem 2

(i) Mean = 107.5143
(ii) Median = 100
(iii) Mode = 75
(iv) Standard deviation = 39.33893

Problem statement 3

For $x_1, x_2, \dots, x_n$ with probability distribution function $f(x_i)$

(i) Mean = $\sum_{i=1}^{n} x_i * f(x_i)$
(ii) Variance = $\sum_{i=1}^{n} x_i^2 * f(x_i) - mean^2$

Using R to calculate the above

```
#Problem statement 3
>
> x = c(0,1,2,3,4,5)
> f_x = c(0.09,0.15,0.4,0.25,0.1,0.01)
>
> #Mean
> mean_x = sum(x*f_x)
> mean_x
```

```
[1] 2.15
>
> #variance
> var_x = sum((x^2)*f_x)-mean_x^2
> var_x
[1] 1.2275

>
```

Answer Problem 3

(i) Mean = 2.15

(ii) Variance = 1.2275

Problem statement 4

The PDF does not contain the random variable
